Professional Summary

Java Software Engineer with 1.7+ years of experience building and maintaining scalable enterprise applications using Java, Spring Boot, and Microservices. Skilled in developing RESTful and SOAP APIs, backend service integration, and full SDLC delivery from requirements through deployment. Hands-on with cloud-native modernization (Tanzu to Kubernetes), CI/CD (Concourse), and production troubleshooting (Dynatrace, Humio). Expanding into full-stack development with Angular and PostgreSQL, including a self-built app with JWT auth and a generative-AI feature. Insurance-domain experience with Great American Insurance Company.

Education

SASTRA Deemed University

Bachelor of Technology in Computer Science and Engineering

Oct. 2020 – May 2024

Kumbakonam, Tamil Nadu

Experience

LTM

Dec 2024 – Present

Software Engineer - Java, Spring Boot & Microservices

Bangalore, Karnataka

- Developed and enhanced Java and Spring Boot microservices based on business requirements, implementing REST API enhancements and backend functionality changes.
- Developed and maintained RESTful APIs, handling request/response processing, service integrations, validations, and requirement-driven enhancements.
- Contributed to microservices modernization (Tanzu to Kubernetes migration) and SOAP-to-REST service migration, modernizing legacy services.
- Supported deployments using Concourse CI/CD pipelines; troubleshoot build and deployment issues across environments.
- Performed troubleshooting and log analysis using Humio and Dynatrace to resolve functional, integration, and production issues.
- Participated in code debugging, defect resolution, unit testing, and integration testing to ensure application quality and reliability.
- Collaborated with cross-functional teams throughout the SDLC and proactively proposed AI-driven automation ideas to reduce repetitive incident-resolution effort.

Projects

Drive U | Java, Spring Boot, Angular

February 2025

- Built backend services and REST APIs to support training workflows and operational processes.
- Designed modular controller and service layers following clean architecture principles.
- Implemented centralized exception handling to improve error management and system stability.
- Improved maintainability through reusable and loosely coupled components.

Job Application Tracker | Java, Spring Boot, Angular

August 2026

- Built a full-stack job application tracking platform with Java, Spring Boot, Angular, and PostgreSQL.
- Implemented JWT authentication, BCrypt password hashing, and role-based authorization for secure user data access.
- Developed RESTful APIs with pagination, dynamic filtering, global exception handling, and search.
- Integrated the Google Gemini API to generate AI-powered interview questions from job descriptions.
- Automated stale-application reminders using Spring Scheduler and cron-based jobs.

Technical Skills

Programming Languages: Java, Python, SQL

Frontend Technologies: Angular (TypeScript), HTML, CSS

Backend Technologies: Spring Boot, Microservices, REST APIs

API & Integration: REST, SOAP, Swagger, SoapUI

Monitoring & Troubleshooting: Dynatrace, Humio

Developer Tools: Git, GitHub, VS Code, IntelliJ
